

2-PYRAZOLIN-5-ONES

ABSTRACT OF THE DISCLOSURE

5 Chemical compounds having structural formula I

I.

and physiologically acceptable salts thereof, are inhibitors of serine/threonine and
15 tyrosine kinase activity. Several of the tyrosine kinases, whose activity is inhibited by
these chemical compounds, are involved in angiogenic processes. Thus, these chemical
compounds can ameliorate disease states where angiogenesis or endothelial cell
hyperproliferation is a factor. These compounds can be used to treat cancer and
hyperproliferative disorders.
